The Right Headset for the Right Application

Aside from a sophisticated software package, hardware plays an important role in mobile data capture with voice. The headsets especially have to meet high requirements in regards to durability, comfort and quality of voice recognition. Voice inputs will only be recognized correctly if background noises are filtered out which in turn ensures reliable voice recognition.

Regardless of difficult conditions, changing noise levels, wearing hats or helmets, whether cabled or wireless applications, topsystem offers the right headset for the right environment.

Every topsystem headset has been specifically manufactured for use with the Lydia[®] voice recognition system. Naturally, each headset undergoes strenuous testing to guarantee excellent performance in the challenging environment of distribution and manufacturing sites.

VOICE SOLUTIONS

NoiseCanceling

The Proven

A bestseller for years, this tested and proven headset has excellent voice recognition and is very easy to wear. It is available as a regular headset or neckholder.

NoiseCanceling

The Rugged

The choice for everyone who favors a comfortable yet rugged headset. It is suitable for almost any standard application and is available in two sizes, Standard and Large.

NoiseCanceling

The Ultra-Light-Weight

There is no headset lighter on the market! This type is so feather light, that the users barely feel it. Despite its light weight, this headset is robust enough for the daily warehouse routine and can even be worn underneath a helmet, if required.

NoiseMaster

The Noise Resistant

The NoiseMaster's special feature is the fact that it eliminates extreme background noises, even over 94dB. Due to the special microphone it is also suitable for use in a deep freeze environment.

BlueMaster

The Wireless

The Bluetooth headset Lydia BlueMaster is a proven winner, with its high wearing comfort and a battery life of up to 14 hours. It can be connected to mobile computers as well as forklift terminals.

NoiseCanceling

The Comfortable

Thanks to the intelligent neckband, this headset guarantees an outstanding wearing comfort as well as a perfect fit. It is especially qualified for wearing under helmets and other headgear.
